SUMMARY

Software Engineer and MSc Data Science & Artificial Intelligence student with professional experience developing enterprise applications and building AI-driven solutions. Skilled in Machine Learning, Deep Learning, Computer Vision, Python, SQL, and data analytics with hands-on experience developing CNN based image recognition systems, predictive models, and data visualization dashboards. Passionate about applying AI and data science to solve real-world problems in aviation, automation, and intelligent systems.

EDUCATION

Middlesex University Dubai — MSc Data science and Artificial Intelligence

Jan 2026 - Intake

University of Central Lancashire — BSc (Hons) Software Engineering

March 2022 – May 2025 | First class Honours | Gold Medallist | APM: 77.4%

AREAS OF EXPERTISE

- Artificial Intelligence & Machine Learning
- Cloud Computing & CI/CD Pipelines
- Langchain, MCP, AI Agents
- Vector Databases (QDrant), Multimodal Embeddings, Prompt Engineering
- Business Development.
- Research, Experimentation & Technical Documentation.
- Model Training, Evaluation & Optimisation.
- Database Management (SQL & NoSQL)
- Generative AI & NLP.
- Team Building & Leadership
- Software Development & System Design
- Knowledge Sharing

SKILLS

Technical Skills

- Python, JavaScript, SQL
- Machine Learning, Deep Learning, TensorFlow, Engineering, Model Training, Model Evaluation, Data Preprocessing, Predictive Analysis, GenAI, Agentic AI
- Data Analysis, Data Visualization, Statistical Analysis, Power BI, Dashboard Development.
- Software Development – Angular, React, HTML5, CSS3, Node.js, .NET Core, REST APIs, Microservices

- Cloud & DevOps – Microsoft Azure, Docker, Azure Devops, Git, TFS, Terraform, RabbitMQ, CI/CD
- Databases – MySQL, Oracle, AWS
- Methodologies – Agile, Scrum, Performance Optimization, API Optimization.

Soft Skills

- Effective Communication & Teamwork
- Time Management
- Adaptability & Resilience
- Leadership.

EXPERIENCE

Technical Project Management Intern, Tech Unicorn — Dubai, UAE

Apr 2026 – July 2026

- Coordinated end-to-end project setup from scratch, delivering UAT builds on schedule for 100% of client testing cycles.
- Partnered with QA team to implement double-testing protocols, cutting testing time by 50% and reducing post-release bugs.
- Authored clear feature documentation for new releases, reducing client support queries and speeding up onboarding.
- Led requirement-gathering sessions with stakeholders, translating client needs into actionable specs that improved client satisfaction scores.

- Drove daily stand-ups to flag priority issues early, accelerating project timelines and keeping delivery on track.
- Bridged communication between developers and QA teams, cutting feature turnaround time by 75% through streamlined handoffs.

Associate Software Engineer, Scienter Technologies

June 2024 – Apr 2025

- Built and enhanced enterprise-level CRM Modules using Angular, .NET Core, and Restful APIs, delivering 10+ features across 6 Agile sprints.
- Resolved dozens of QA-reported defects and production issues, reducing critical bugs by 35% and improving overall application stability.
- Optimized backend APIs and SQL queries through indexing and query tuning, cutting response times by up to 30%.
- Conducted peer code reviews on 5+ pull requests weekly, improve code maintainability and reducing post-merge defects by 15%

Software Engineering Intern, Scienter Technologies

June 2023 – June 2024

- Built multiple reusable Angular components and .NET Core REST APIs under senior developer mentorship, accelerating feature delivery across 3 sprint cycles.
- Designed data validation logic and supported database schema improvements, reducing data entry errors by 25% and boosting system reliability.
- Managed version control and CI/CD workflows using Git, TFS, and Azure DevOps, enabling seamless collaboration across a 5-person development team
- Delivered full-stack features end-to-end within Agile teams, contributing to 4+ enterprise application releases over the internship period.

PROJECTS

LashLens – AI Makeup Recommendation System

- Technologies – Python, TensorFlow, CNN, OpenCV, Angular, FastAPI
- Designed and developed an AI-powered computer vision system to analyse facial images and estimate eyelash length.
- Built and trained Convolutional Neural Networks (CNNs) for image classification.
- Applied image processing, feature extraction, and model evaluation techniques using OpenCV and TensorFlow.
- Generated personalized product recommendations based on AI predictions.
- Developed an Angular interface for real-time image analysis and recommendation delivery.

Distributed Quiz Application

- Technologies – Node.js, Docker, RabbitMQ, Terraform, Azure
- Designed a scalable distributed system using a microservice architecture.
- Containerized backend services with Docker and deployed applications on Microsoft Azure.
- Implemented asynchronous inter-service communication using RabbitMQ.
- Automated infrastructure deployment using Terraform.
- Improved system scalability and maintainability through service decoupling.

Global Health Analytics Dashboard

- Technologies – Power BI, Python, DAX, SQL.
- Built interactive dashboards analysing obesity, diabetes, and hypertension trends across multiple countries.
- Cleaned and transformed public health datasets using Python and SQL.
- Developed dynamic DAX measures, drill-through reports, and Top N analysis.
- Produced visual insights supporting data-driven healthcare decisions.

PUBLICATION

Lash Lens: An Intelligent System for Makeup Recommendation - Accepted and presented at the 12th International Conference on Computer Science and Information Technology (CSIT 2025).
